enhancing your dining experience.

## Problem

**Ordering at a restaurant is cumbersome.**

You don't know if the actual dish is what you wanted until it arrived at your table. You are not sure if you ordered enough, or over-ordered. You have questions but the waiters are busy serving other customers.

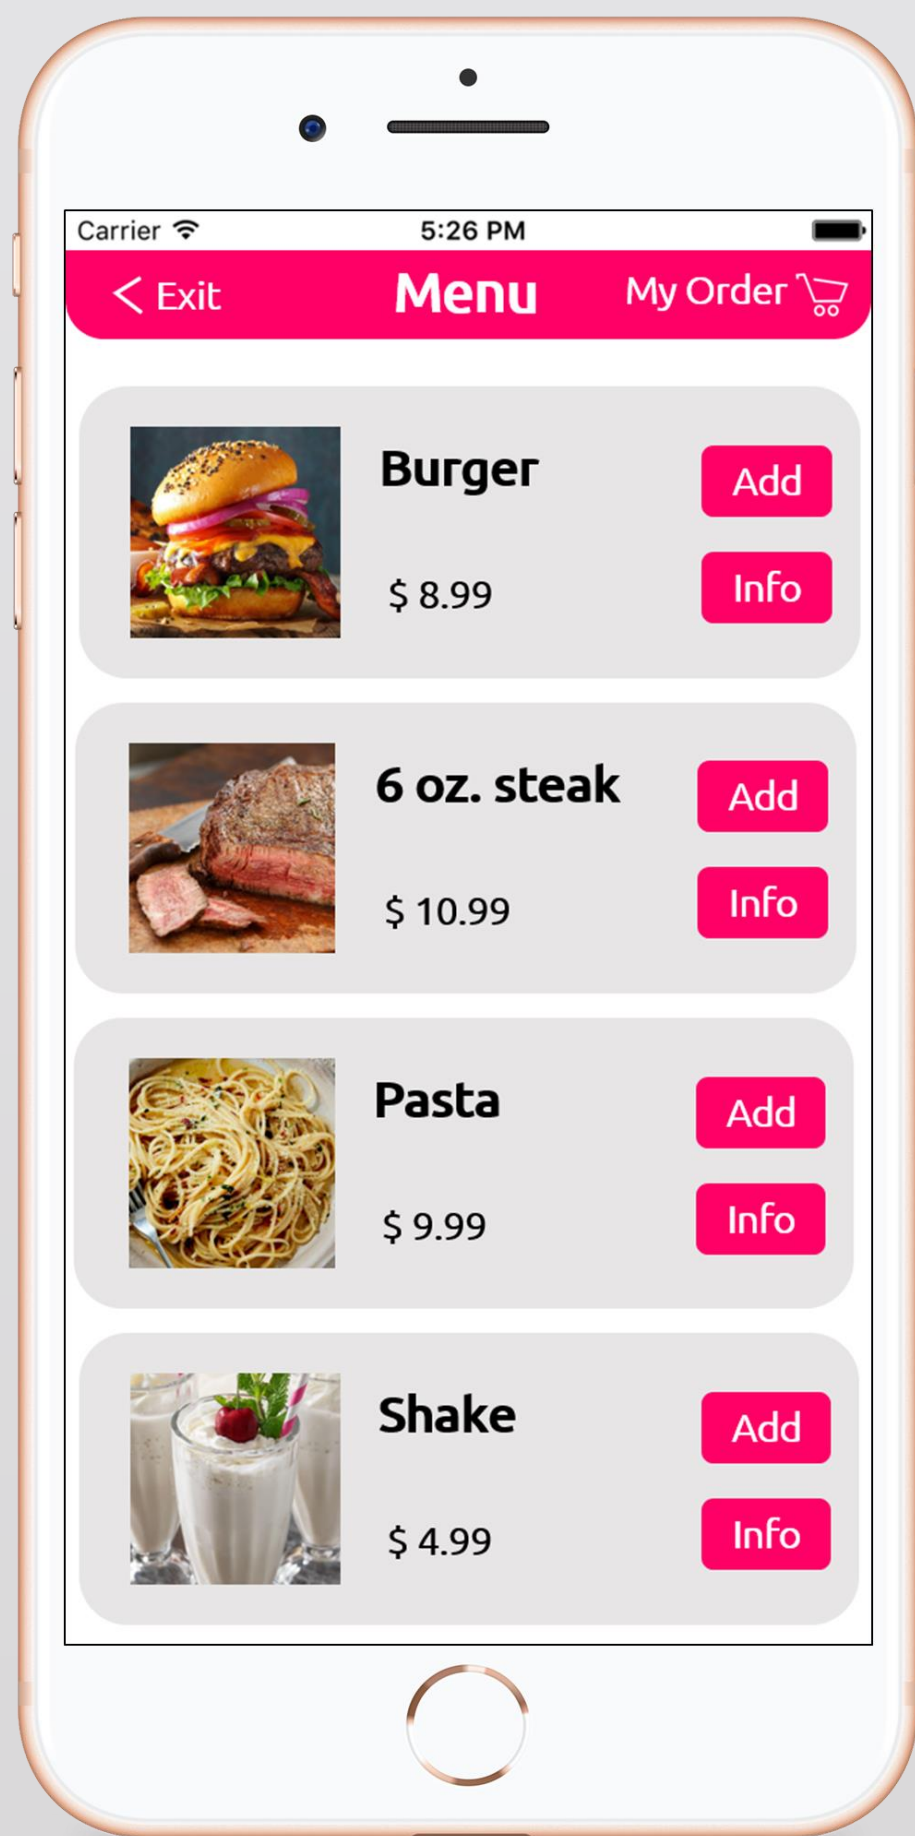

## Value Proposition

**Know exactly what you are going to order, and how much you are ordering.  
Order directly on your phone – no more waiting for your server, ever.**

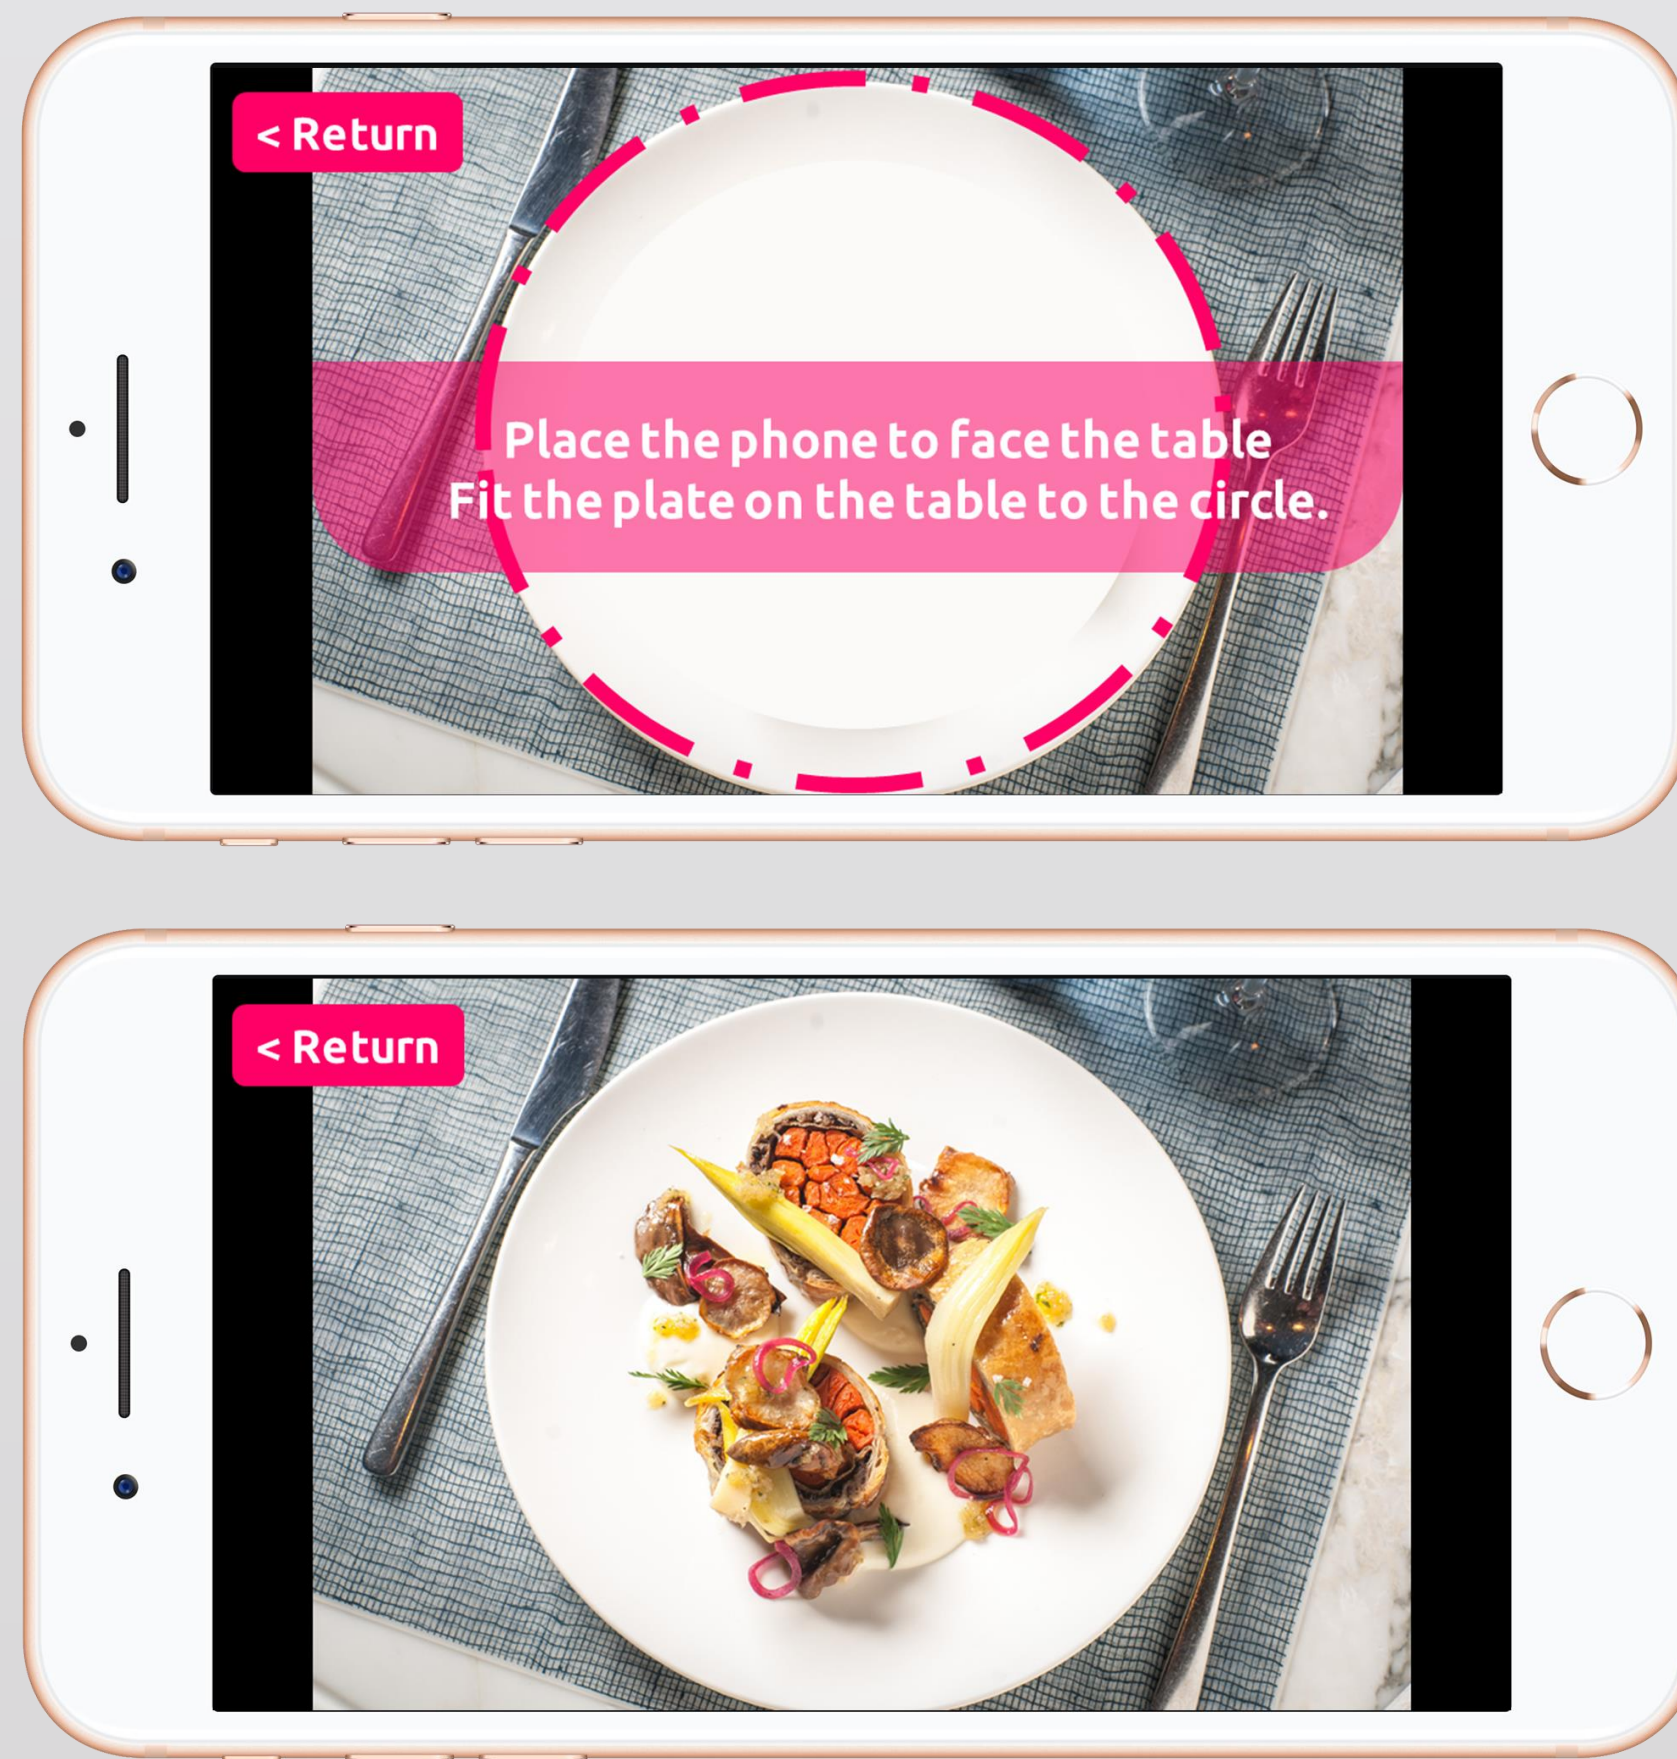

## Functionality

TasteBud allows you to browse, visualize, order, track, and pay, right at your fingertips.

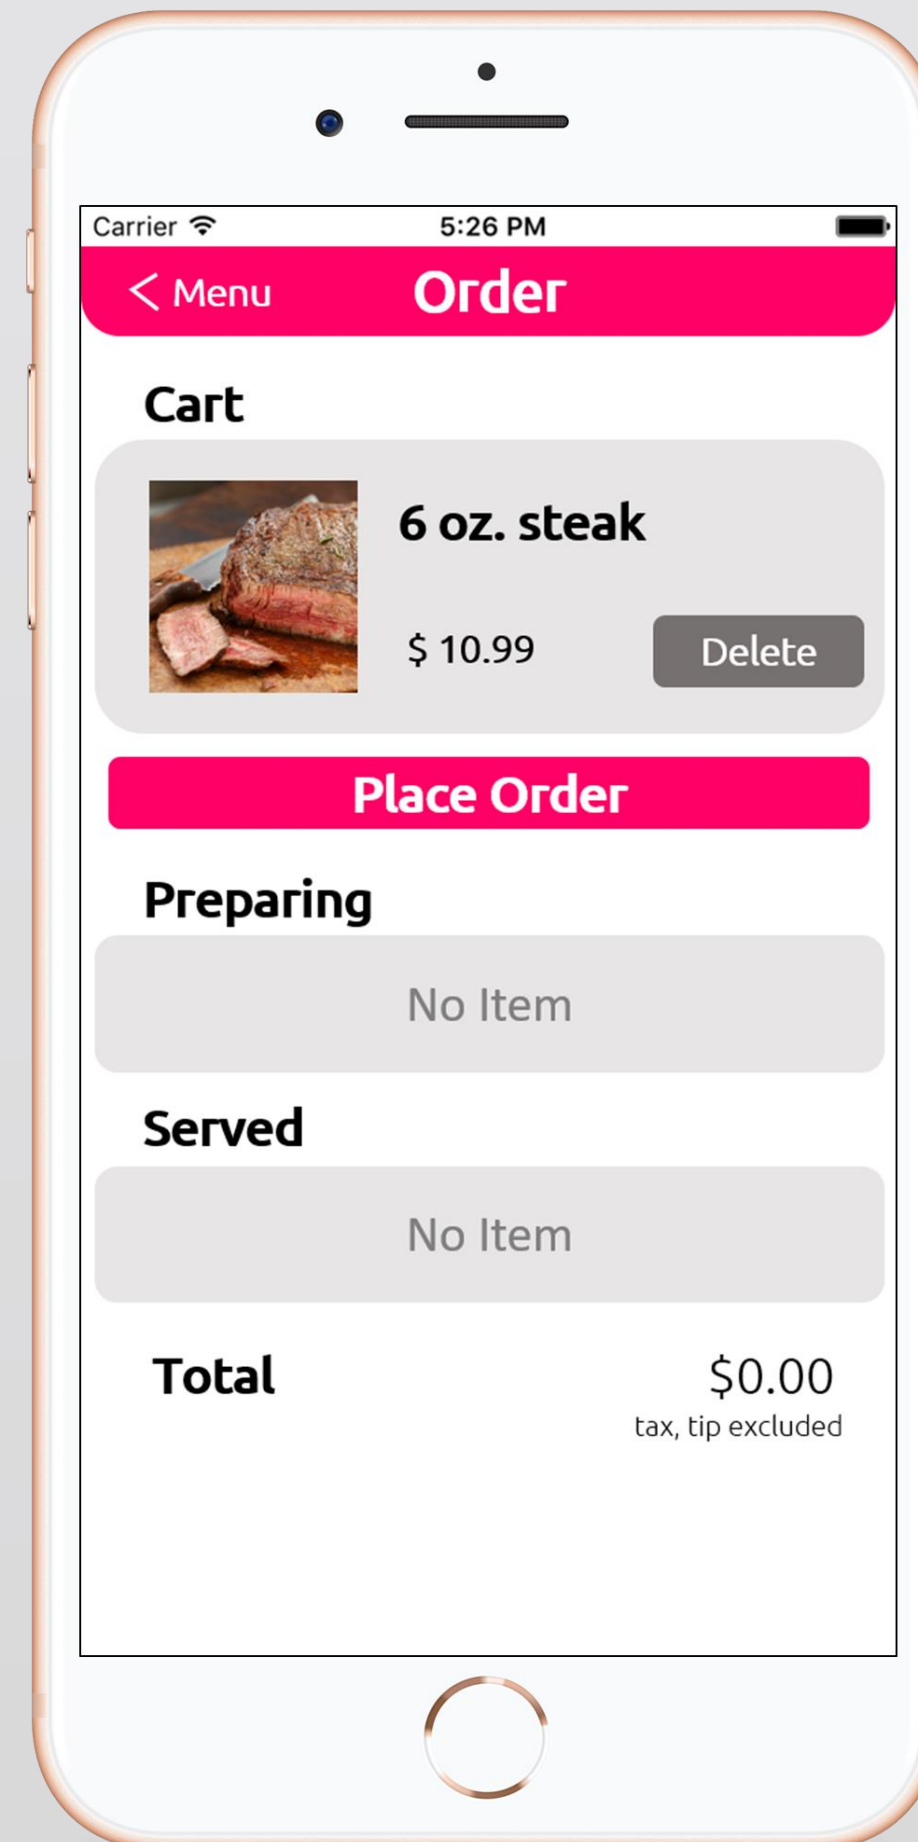

browse.

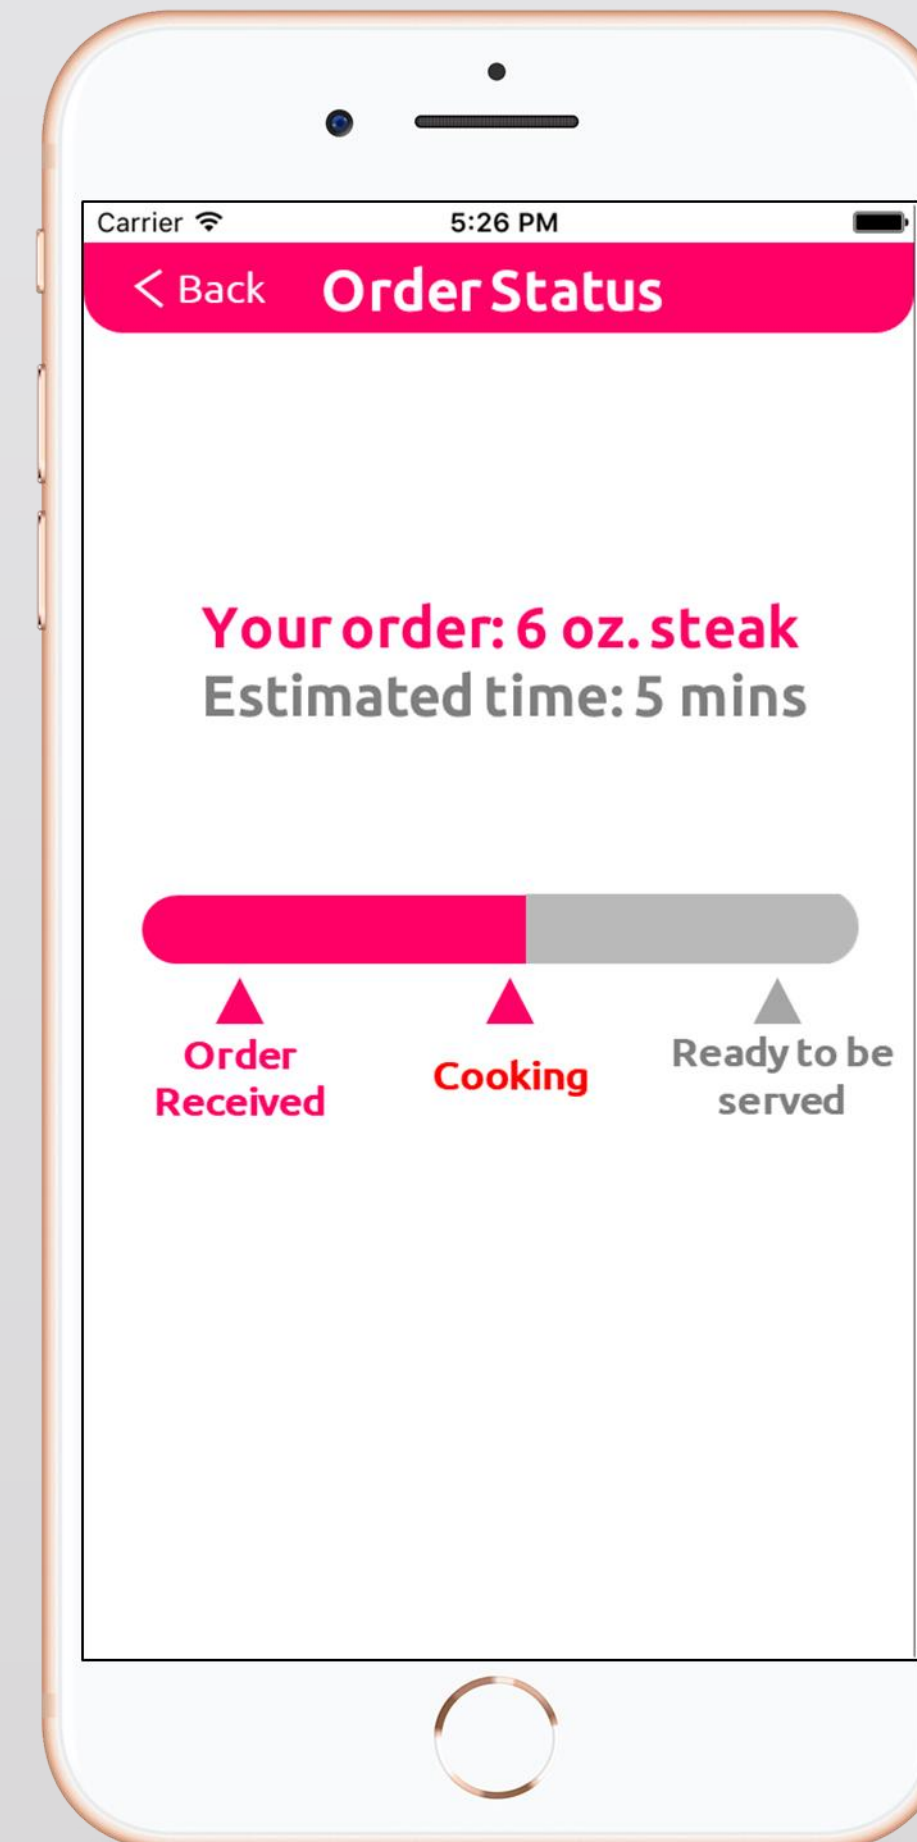

visualize.

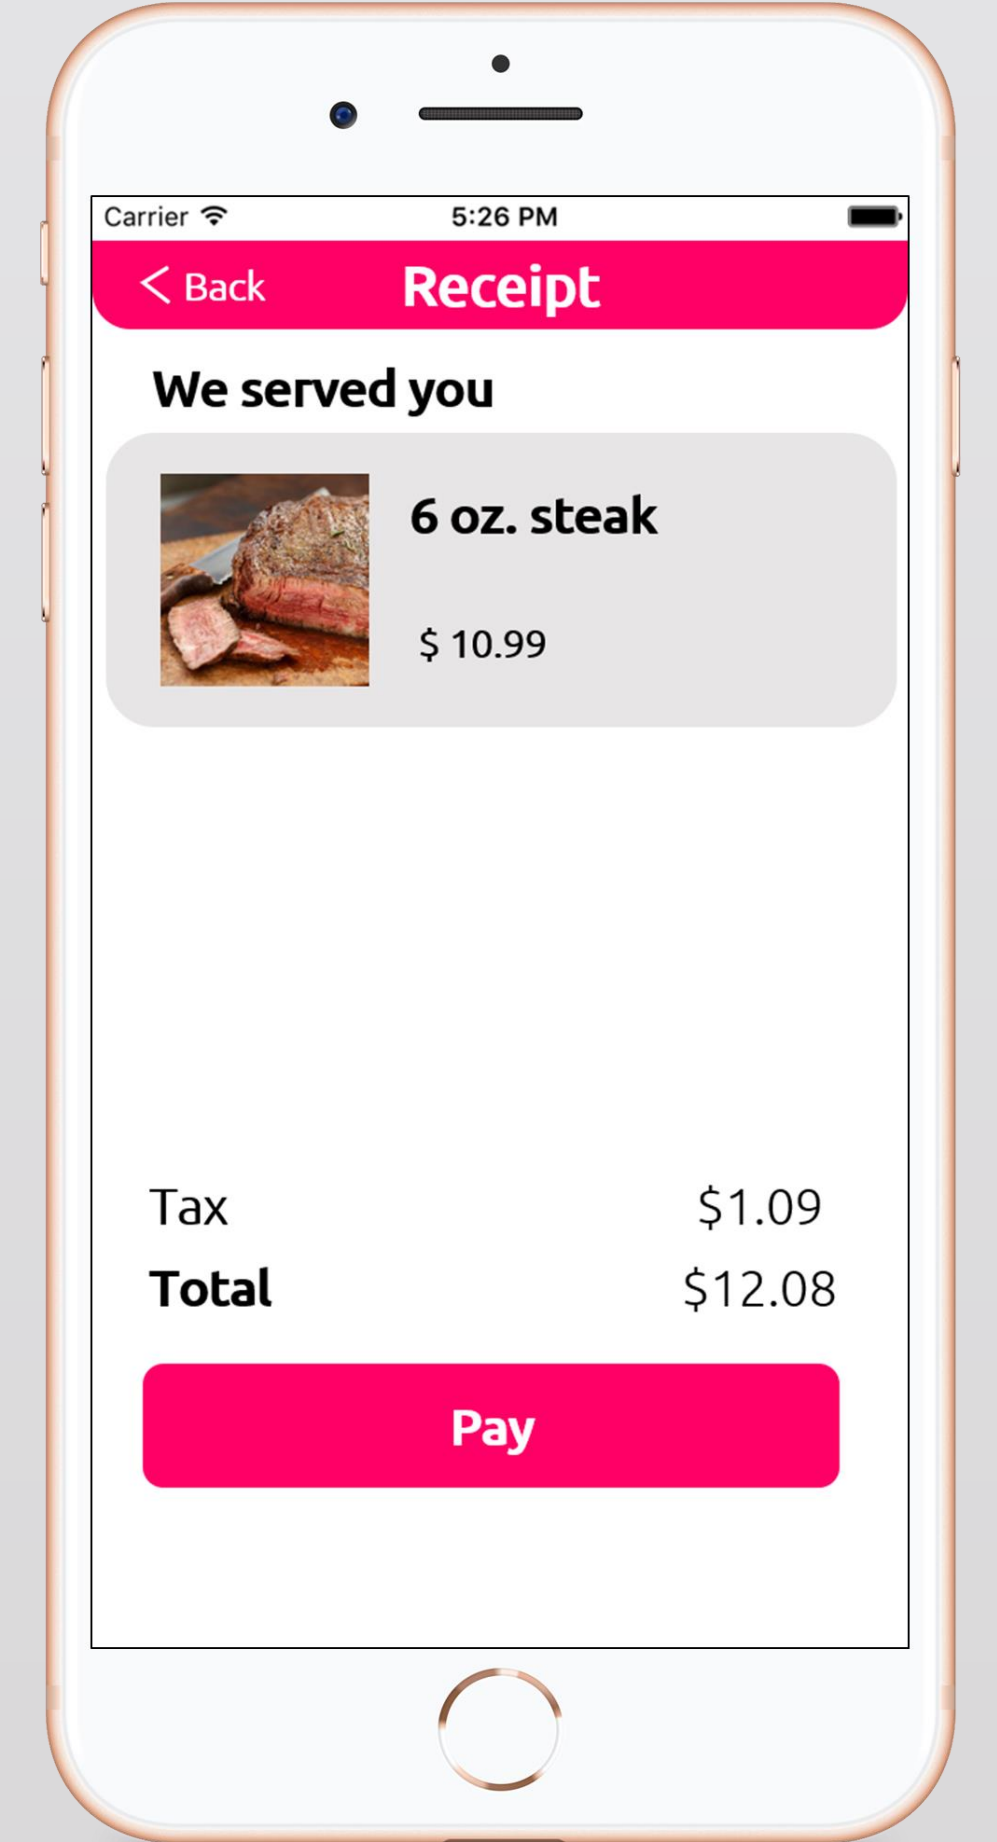

order.

track.

pay.

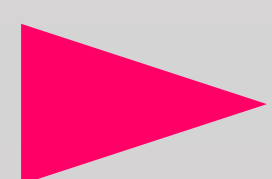

▲ AR-based visualization of portion sizes

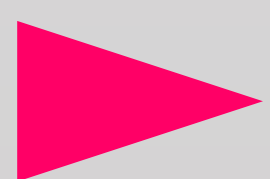

▲ real-time status notification
